Dante Tura Salvador

SUMMARY OF EXPERIENCE

As an experienced Software Development Team Lead, Software Architect, and Database Designer specializing in .NET technologies, I possess proven expertise in leading development teams, designing scalable architectures, and optimizing database solutions. I am a strong problem-solver passionate about mentoring teams, implementing best practices, and delivering high-quality software solutions.

Technical Initiatives

Demonstrating innovation and technical leadership beyond core responsibilities

- Fullstack SaaS Demo – Software Project Management & Delivery (On-going)
    - Directed a multi-frontend SaaS (Angular, React, Blazor, Razor) backed by a shared ASP.NET API and Aspire orchestration.
    - Managed Azure DevOps end-to-end (epics → features → stories → tasks), including sprint planning, tagging, assignments, and state transitions for Sprint to Sprint (Foundation, Multi-Frontend, Authentication & Security and others).
    - Implemented Tailwind modernization, platform-wide API hardening, and Entra ID-ready authentication while enforcing SOLID/clean architecture patterns and full-stack integration testing.
    - Maintained repo hygiene, documentation, and CI/CD-ready practices to showcase production-quality engineering.
    - GitHub: github.com/DanteTuraSalvador/dotnet-fullstack-saas-demo
- **Open-Source Engineering**: Showcasing professional coding standards through DDD implementations
    - Enforced SOLID principles & decoupled component architecture
    - Maintained comprehensive unit/integration testing coverage
    - GitHub Portfolio: TestNest.StronglyTypeId, TestNest.ValueObjects, TestNest.SmartEnums, TestNest.ResultPatterns, TestNest.SmartEnumResult, TestNest.DomainEF
- **Fullstack Demo Applications**: Delivered sample solutions demonstrating production-ready patterns in Blazor, Razor Pages, and ASP.NET MVC
    - Focused on clean architecture, separation of concerns, and full-stack integration
    - Reinforced best practices in UI/UX and backend design

Block 10 Lot 26 Molave Street, Calendola Village, San Pedro, Laguna 4023
Mobile Phone: +639498413303
Email: tengtium@gmail.com; tengtium@proton.me

- GitHub Portfolio: Modular-Clean-Architecture-API, CQRSCleanApi, MinimalAPICleanArchitecture, TestNest.CleanArchitecture, SkillManager-Blazor, SkillsManager-RazorPages, SkillsManager-MVC, SkillManager-Blazor-API

- **Technical Exam Portfolio (GitHub)**: Completed multiple company coding assessments demonstrating rapid onboarding, requirements digestion, and delivery of production-ready solutions; code samples available at github.com/DanteTuraSalvador (PomodoroDesk, RNGService, Order Submission System).

Key Skills:

- **Leadership & Team Management:** Proactive and result-oriented team leader, adept in mentoring and motivating teams, effective communicator. Knowledgeable using Agile/Scrum.
- **Software Architecture:** Microservices, REST-API, cloud-based solutions, knowledgeable in software architecture design such clean architecture and vertical slice architecture
- **Database Design:** Experienced in relational databases in Microsoft SQL Server, PostgreSQL
- **Full-Stack Development:** .NET Core, ASP.NET, Entity Framework, Dapper
- **DevOps & Infrastructure:** Docker, RabbitMQ, MassTransit, Azure Active Directory, AzureDevops
- **Testing & Quality Assurance:** FluentAssertions, Bogus, ArchUnit, NUnit, xUnit.

PROFESSIONAL EXPERIENCE

.NET Developer

Radix Systems Services Corporation: | Aug 11, 2025 – Present | Mandaluyong City
Client: SM Retail Incorporated : Mall of Asia Complex, Pasay City, Philippines

- Develop, maintain, and enhance a high-volume ETL pipeline built on the .NET Framework, processing and transforming data for business intelligence and analytics.
- Refactor and extend existing ETL components based on evolving business requirements, improving code quality, functionality, and alignment with new data models.
- Manage and optimize the ETL process for a PostgreSQL database, ensuring data integrity, performance, and efficient data flow.
- Maintain and support a .NET Framework MVC application that serves as a primary Business Intelligence (BI) and reporting tool, aggregating data from the ETL pipeline.
- Collaborate with stakeholders to understand reporting needs and ensure the MVC application delivers accurate and actionable insights for decision-making.

Senior Software Engineer

Harte Hanks Incorporated | May 14, 2012 – September 30,2024 | Taguig City, Philippines

* Duties and Responsibilities

System Design & Development

- Designed and developed internal enterprise applications for HR, employee training, and departmental operations, ensuring scalability and security.
- Built and maintained high-availability services supporting corporate functions across multiple business units.
- Modernized legacy systems to improve performance and maintainability.
- Integrated cross-functional systems to streamline employee onboarding, training tracking, and performance management.
- Ensured compliance with data privacy regulations internal employee data handling.

Standards & Best Practices

- Ensured strict compliance with company standards for database design (normalization, indexing) and coding practices
- Followed established deployment protocols and release management processes
- Conducted code reviews to verify adherence to company architectural and performance standards
- Applied company-mandated security protocols throughout the development lifecycle
- Maintained documentation following corporate IT governance requirements

Security & Performance

- Enforced company security policies for data protection, access controls, and vulnerability management.
- Optimized application performance through load testing, query tuning, and infrastructure improvements.
- Ensured all solutions complied with company IT security standards and compliance requirements.

Technical Leadership & Support

- Provided technical guidance to development teams and helped troubleshoot complex issues.
- Worked with project managers, QA, and business teams to align technical solutions with requirements.
- Mentored junior developers and promoted knowledge sharing.

Improvement & Innovation

- Researched new technologies to improve systems.
- Conducted reviews after deployments to identify areas for improvement.

* Key Projects:

**** Timesheet Web Application ****

(Employee Time Tracking System |. NET 6| Modular Monolith)

- Led modernization of legacy .NET Framework application to ASP.NET Razor, improving maintainability and performance.
- Architected modular monolith with:
  - C# Web API backend
  - MSSQL database (optimized queries for reporting)
  - Oracle/SAP integration for HRIS data synchronization
  - Integrated with SuccessFactors (SAP) to automate employee data sync, reducing manual entry errors.
  - IEX system integration (automated employee shift/attendance data feeds)
- Improved system reliability by decoupling modules, enabling easier updates and scalability.
- Enhanced UX with responsive design, reducing training time for employees.

**** Online Gradebook Web Application ****

(Training & Assessment System | ASP.NET Core | Azure AD | Jira Agile)

- Managed full lifecycle development - gathered HR/Training needs, implemented with Clean Architecture & DDD (Value Objects, Aggregates), planned deployments, and maintained production system
- Managed development with Agile/PERT hybrid - 1-week sprints (Jira) with PERT estimates for high-risk items, working with HR/Training/Operations
- Built with modern stack:
  - ASP.NET Core MVC (frontend), supported by JavaScript, Bootstrap, jQuery, CSS and HTML
  - Web API (backend services)
  - Azure Active Directory integration for enterprise authentication
  - MSSQL database with optimized reporting views
  - Oracle/SAP integration for HRIS data synchronization
- Key features delivered:
  - Automated assessment grading with manual override capability
  - Training completion dashboards with department-level filtering
  - Compliance reporting for audit requirements
  - Reduced training administration time by replacing legacy spreadsheet tracking

**** CoachingTool Web Application ****

(Performance Management System | ASP.NET Core | Azure AD | Jira Agile)

- Managed full lifecycle development - gathered HR/Training needs, implemented with Clean Architecture & DDD (Value Objects, Aggregates), planned deployments, and maintained production system
- Also developed using Agile/PERT hybrid - 1-week sprints (Jira) with PERT estimates for high-risk items, working with HR/Training/Operations

Block 10 Lot 26 Molave Street, Calendola Village, San Pedro, Laguna 4023
Mobile Phone: +639498413303
Email: tengtium@gmail.com; tengtium@proton.me

- Leveraged existing tech stack from Gradebook project for rapid development:
  - ASP.NET Core Razor Pages (frontend)supported by JavaScript, Bootstrap, jQuery, CSS and HTML
  - Web API (backend services)
  - Azure Active Directory integration for enterprise authentication
  - MSSQL database with optimized reporting views
  - Oracle/SAP integration for HRIS data synchronization
- Key functionality implemented:
  - Manager dashboards with coaching compliance alerts
  - Automated reminder system for overdue sessions
  - Digital coaching journal with feedback templates
  - Integration with employee performance records

** Operational Strategy Report Dashboard **

(Business Intelligence Platform | ASP.NET Core | AmCharts | Multi-Source Integration)

- Managed full lifecycle development - collaborated with stakeholder on KPIs, implemented data pipeline, and maintained analytics service., implemented with Clean Architecture, planned deployments, and maintained production system.
- Also developed using Agile/PERT hybrid - 1-week sprints (Jira) with PERT estimates for high-risk items, working with Business Intelligence Team.
- Leveraged existing tech stack from Gradebook project for rapid development:
  - ASP.NET Core Razor Pages (frontend)supported by JavaScript, Bootstrap, jQuery, CSS and HTML. ASP.NET Core Web API (data aggregation layer) with Timesheet system API, Gradebook system API, Coaching tool API and Legacy Excel reports (automated ingestion).
  - Azure Active Directory integration for enterprise authentication
  - Oracle/SAP integration for HRIS data synchronization
  - AmCharts (interactive visualizations)
- Results:
  - Unified different data sources into single dashboard
  - Reduced monthly reporting work
  - Enabled real-time strategy adjustments

** Consequence Management Web Application **

(HR Compliance System | ASP.NET Core | DDD)

- Managed full lifecycle development - worked with HR/Legal teams on compliance requirements, implemented with Clean Architecture & DDD (Value Objects, Aggregates), and maintained disciplinary tracking system.
- Also developed using Agile/PERT hybrid - 1-week sprints (Jira) with PERT estimates for high-risk items, working with Business Intelligence Team.

- Built with:
  - ASP.NET Core MVC (frontend)supported by JavaScript, Bootstrap, jQuery, CSS and HTML
  - C# Web API backend (DDD implementation)
  - MSSQL database (audit-ready design)
  - Azure AD integration (role-based access)
  - Oracle/SAP integration for HRIS data synchronization
  - ChartJS, ApexCharts (interactive visualizations)
- Results:
  - Automated violation classification
  - Escalation workflow engine
  - Real-time compliance dashboards
  - Secure document attachment
- Results:
  - Reduced case resolution time
  - Achieved 100% audit compliance
  - Cut paperwork

Software Architect & Web Application Development Specialist

Stradcom Corporation | March 7, 2005 – May 31, 2012, | Quezon City, Philippines

* Duties and Responsibilities

System Design & Development

- Designed and developed mission-critical government systems for transportation and regulatory agencies (LTO, LTFRB, MMDA, Bureau of Customs), ensuring scalability and security for public use.
- Built and maintained high-availability services supporting:
  - Vehicle registration and driver licensing (LTO)
  - Franchise management (LTFRB)
  - Traffic enforcement (MMDA)
  - Vehicle Motor and Chassis processing (Bureau of Customs)
- Continuous refactoring systems to improve performance and maintainability while preserving existing data.
- Developed cross-agency integrations to streamline:
  - License verification between LTO and LTFRB
  - Violation data sharing between MMDA
  - Public vehicle franchise verification and matching with LTFRB
  - Vehicle Motor and Chassis matching for Customs and LTO
- Ensured compliance with government data privacy regulations (Philippine Data Privacy Act) and ICT security standards for all citizen data handling.

Public Sector Standards & Compliance

- Ensured strict compliance with company standards for database design (normalization, indexing) and coding practices.
- Enforced government ICT security standards for sensitive citizen data
- Followed established deployment protocols and release management processes
- Implemented audit-ready documentation for public accountability
- Conducted code reviews to verify adherence to company architectural and performance standards
- Conducted architecture reviews aligned with national data privacy laws
- Applied company-mandated security protocols throughout the development lifecycle
- Maintained documentation following corporate IT governance requirements

Security & Performance

- Enforced company security policies for data protection, access controls, and vulnerability management.
- Enforced government-mandated security protocols
- Optimized application performance through load testing, query tuning, and infrastructure improvements.
- Ensured all solutions complied with company IT security standards and compliance requirements with government laws and practices (Philippine Data Privacy Act and Agency-specific audit requirements)

Technical Leadership & Support

- Provided technical guidance to development teams and helped troubleshoot complex issues.
- Led and mentored four (4) developers and two (2) business analysts across multiple government projects and software maintenance (LTO, LTFRB, MMDA, Customs) and promoted knowledge sharing.
- Worked with project managers, QA, and business teams to align technical solutions with requirements.
- Provided agency-specific technical guidance on, secure coding practices, legacy system integration, high-volume transaction processing

Improvement & Innovation

- Researched new technologies to improve systems.
- Conducted reviews after deployments to identify areas for improvement.

* Key Projects:

** Webcam Library **

(Image Capture Utility | VB6 | C++/Win32 AP | LTO-Core Integration)

- Led hardware-to-software transition by developing custom VB6 DLL to replace digital cameras across 200+ LTO offices
- Architected low-level solution with:
  - VB6 COM component with C++ performance optimizations

    - DirectShow API for real-time image capture
    - Custom JPEG compression algorithm
- Key integrations:
    - Plugin replacement for existing LTO-Core application
    - Legacy-compatible error handling
    - Registry-based configuration
- Results
    - Reduced hardware costs and maintenance
    - Maintained 100% backward compatibility

** Wacom Library **

(Digital Signature Utility | C++/Win32 API | LTO-Core Integration)

- Developed low-level Windows API/DLL to convert Wacom tablets into standardized signature pads for LTO systems
- Technical Implementation:
    - C++ Win32 DLL with exposed COM interface
    - Custom pressure sensitivity calibration
    - Signature vectorization for compact storage
- Key Features:
    - <100ms capture latency
    - 1:1 ink-to-hardware accuracy
    - Dynamic signature quality validation
- Results
    - Reduced signature pad costs 60% by leveraging existing hardware
    - Maintained 100% backward compatibility

** LTO Info Text SMS Service **

(Government Inquiry System | C# ASMX Web Service | Xurpas Integration)

- Managed full lifecycle development - collaborated with LTO and Xurpas to build one of the Philippines' first SMS-based government inquiry systems.
- Built with period-accurate tech:
    - C# ASMX Web Services (.NET Framework 2.0)
    - SOAP protocol for system integration
    - MSSQL 2005 database (optimized for high-volume queries)
    - Xurpas SMPP gateway integration
- Key Features:
    - One of the first government SMS services in the Philippines
    - Pioneered high-availability design for 24/7 public systems
    - Developed custom threading model to handle 50+ concurrent requests
- Results

- Reduced LTO center inquiries
- Processed thousands monthly inquiries at launch
- 99.9% uptime despite limited infrastructure

** Certificate of Cover Verification Facility **

(Insurance Verification System | C# ASMX Web Service)

- Managed full lifecycle development - collaborated with PIRA (Philippine Insurers & Reinsurers Assoc.), OICP, and major insurers (Malayan, Pioneer, Mapfre) to build one of PH's first real-time insurance verification platforms.
- Built with period-accurate tech:
  - ASMX Web Services (.NET 2.0) with SOAP/WSDL
  - WS-Security for policy data protection
  - MSSQL 2005 database (optimized for high-volume queries)
  - LTO-IT's legacy Sybase ASE 12.5 (vehicle/policy records)
- Key Features:
  - Philippines first real-time insurance verification platforms.
  - Pioneered high-availability design for 24/7 public systems
  - Developed custom threading model to handle 50+ concurrent requests
- Results
  - Reduced fraudulent COCs industry-wide
  - Cut verification time
  - Enabled 24/7 verification for LTO offices
  - Processed 5M+ annual verifications at peak

** LTFRB Franchise Confirmation Facility **

(Franchise Verification System | C# ASMX Web Service)

- Managed full lifecycle development - collaborated with LTFRB Technical Division to build the first nationwide motor vehicle and driver license verification system for 500K+ PUV operators and drivers
- Built with period-accurate tech:
  - ASMX Web Services (.NET 2.0) with SOAP/WSDL
  - WS-Security for policy data protection
  - MSSQL 2005 database (optimized for high-volume queries)
  - LTO-IT's legacy Sybase ASE 12.5 (vehicle/policy records)
- Key Features:
  - Pioneered the first unified driver-vehicle-franchise verification system in Philippine transport regulation.
  - Implemented real-time LTO driver's license validation through direct web service integration, automatically flagging expired or suspended licenses.
  - Built automated registration status checks against LTO's vehicle database, rejecting applications with expired or invalid registrations.

- Results
  - Reduced fraudulent PUV operators
  - Cut franchise processing time

** BOC Integration System **

(Customs-LTO Data Pipeline | MSMQ + FTP Automation)

- Managed full lifecycle development - collaborated with Bureau of Customs (BOC) and LTO-IT to build the Philippines' first automated vehicle import tracking system
- Philippines' first automated vehicle imports tracking system, giving LTO real-time data on imported vehicles/chassis before manufacturer processing.
- Developed a mission-critical Windows Service in C# .NET 2.0 that automated the end-to-end BOC-LTO data pipeline - monitoring FTP for vehicle manifests, parsing ANSI-encoded files, validating via MSMQ, and batch-inserting clean records to Sybase
- Technical Implementation:
  - Windows Service
  - MSMQ implementation
  - MSSQL 2005 database (optimized for high-volume queries)
  - LTO-IT's legacy Sybase ASE 12.5 (vehicle/policy records)
- Key Features:
  - Chassis Number Validation: Prevented duplicate/VIN-cloned imports.
  - Blocked duplicate/cloned vehicle registrations through real-time chassis number verification, reducing fraudulent imports
- Results
  - Reduction in smuggled vehicles
  - Discrepancies in engine/chassis data
  - coverage of all vehicle imports nationwide

** MMDA ILES (Integrated Law Enforcement System) **

(Traffic Violation Management System | ASP.NET Razor)

- Managed full lifecycle development - collaborated with MMDA Traffic Discipline Office to build the first real-time violation-to-license blocking system for Metro Manila's 500+ traffic enforcers.
- Built with period-accurate tech:
  - ASP.NET Core Razor Pages (frontend)supported by JavaScript, Bootstrap, jQuery, CSS and HTML
  - Custom WS-Security for field data protection
  - MSSQL 2005 database (optimized for high-volume queries)
  - LTO-IT's legacy Sybase ASE 12.5 (vehicle/policy records)
  - Custom authentication and role base authorization
- Key Features:
  - Pioneered the first ticket-to-license block system in Philippine traffic enforcement

    - Implemented real-time LTO driver flagging through direct Sybase integration, automatically preventing license renewal for unpaid violations
- Results
    - Reduced unpaid violations
    - Cut franchise processing time

Developer/Programmer

128 Tech. Consulting | July 22, 2004 – March 7, 2005 | Quezon City, Philippines

- Developed, modified, tested, implemented and maintained various application systems.
- Analyzed user requirements and current programs and made proposals for enhancement/modification for functionality and user productivity.
- Tested existing program for any bugs and reported client's feedback on programs weakness and strengths

Key Projects:

- **Marketable Securities Application**: Tracking, Analysis and Reporting Tool.
- **General Ledger Web Application**: Recording, classifying and Summarizing reporting tool.

Other Software Developer & IT Support Roles

- **Trimex Computer School (2004)**: IT Support Head and Trainer for short-term programming courses
- **F. Gutierrez Construction Corp. (2001-2002)** : Maintained and developed internal business applications (Post Dated Check Monitoring, Purchase Order System, Requisition System, Inventory System)
- **Sampaguita National High School**: Computer teacher and IT Support Head.

Training's & Seminars

Developing XML Web Services using Microsoft ASP.NET (Course 2524)
July 2006
EDU PRO

Web Intelligence Report Design Training
May 2008
Workcentric Solutions Consulting Inc.

Internal ISMS Audit Training
October 2008
ECCI Training Services

Replication Server Primer
October 2006
Professional Services Sybase Solution Corporation

Effective Business Writing Workshop
June 2006
The Mentor Group – Professional Training Consultant & Associâtes

Programming with XML in the Microsoft.Net Framework (Course 2663)
June 2006
EDU PRO

Advance Web Application Development using Microsoft ASP.NET
April 2004
MISNET Education, Inc.

GitHub Samples

Strongly Type Id Library
https://github.com/DanteTuraSalvador/TestNest.StronglyTypeId
Applied the principle of creating specific ID types within the Domain-Driven Design context to ensure explicit representation of domain entities and enhance type safety throughout the application

Value Object Library
https://github.com/DanteTuraSalvador/TestNest.ValueObjects
Applied the DDD principle of creating immutable objects that represent domain concepts by their attributes, leading to a richer and more expressive domain model with inherent immutability.

Smart Enum
https://github.com/DanteTuraSalvador/TestNest.SmartEnums
Applied the DDD concept of enriching enumerated types to model domain states with related data and behavior, resulting in a more cohesive and maintainable domain model.

Result Pattern
https://github.com/DanteTuraSalvador/TestNest.ResultPatterns
Implemented a standardized way to represent the outcome of operations, including success or failure with associated data or error details, improving error handling and code clarity.

Domain Model and Entity Framework
https://github.com/DanteTuraSalvador/TestNest.DomainEF
Designed a rich domain model aligned with business logic and utilized Entity Framework Core for data persistence, employing Migrations for database schema management and evolution.

Modular Clean Architecture – Controller Based API
https://github.com/DanteTuraSalvador/Modular-Clean-Architecture-API
Showcases a modular API built with Clean Architecture principles. The project emphasizes a well-structured domain and demonstrates the use of Entity Framework Core Migrations for database management. It incorporates key DDD concepts and architectural patterns, including the Repository pattern for data access abstraction and well-designed API endpoints for interaction with the domain.

Minimal API – Modular Clean Architecture
https://github.com/DanteTuraSalvador/MinimalAPICleanArchitecture
Showcases a minimal API built with Clean Architecture principles. The project emphasizes a well-structured domain and demonstrates a streamlined approach to API development. It incorporates key DDD concepts and architectural patterns, including the Repository pattern for data access abstraction and

well-defined API endpoints for interaction with the domain

SkillManager-Blazor

https://github.com/DanteTuraSalvador/SkillManager-Blazor

A modern, professional skills management system built with Blazor Server, Entity Framework Core, and Docker. Manage team members, skills, and skill assignments with proficiency levels.

SkillsManager-RazorPages

https://github.com/DanteTuraSalvador/SkillsManager-RazorPages

A professional Skills Manager application built with ASP.NET Core Razor Pages, featuring complete CRUD operations for skills and team members.

SkillsManager-MVC

https://github.com/DanteTuraSalvador/SkillsManager-MVC

A professional Skills Manager application built with ASP.NET Core MVC and the beautiful Phoenix admin template. Features complete CRUD operations for skills and team members with a modern, responsive design.

SkillManager-Blazor-API

https://github.com/DanteTuraSalvador/SkillManager-Blazor-API

A comprehensive skill management system built with .NET 9, Blazor Server, Clean Architecture principles, and .NET Aspire for cloud-ready, observable, and production-ready distributed application development.

Order SubSystem

https://github.com/DanteTuraSalvador/Order Submission System

ASP.NET Web API application for processing customer orders with payload validation and routing to multiple downstream systems (SQL database, FTP). Built with infrastructure services and Docker support..
